This comparison gives you an idea of the costs involved in managing your own solution. As you can see, there is a very low cost to implement our solution. With our advanced applications infrastructure and technical expertise, we can give you a high-end solution for a fraction of the cost of an "in-house" solution. The total cost past the first year may seem to decrease overall, but you must remember that maintenance and upgrades will end up costing you, as well as providing a backup solution. We are also completely scalable. Simply add users as your needs grow, without worrying about additional servers, software, and upgrade purchases.
