

Windows® SharePoint™ Services lets you create a central location where co-workers, partners, and customers can share issues, contacts, announcements, Web links, and calendars.

Team members can easily create workspaces for meeting discussions, surveys, documents, task lists, and other collaboration needs that increase their productivity.

Connect people with the information and resources they need. Users can create team workspaces, coordinate calendars, organize documents, and receive important notifications and updates through communication features including announcements and alerts, as well as the new templates for creating blogs and wikis. While mobile, users can take advantage of convenient offline synchronization capabilities.

With enhanced document management capabilities including the option to activate required document checkout before editing, the ability to view revisions to documents and restore to previous versions, and the control to set document- and item-level security, Windows SharePoint Services can help ensure the integrity of documents stored on team sites.

HOSTED SHAREPOINT

Red Ember provides a business-class collaboration solution with the following key features:

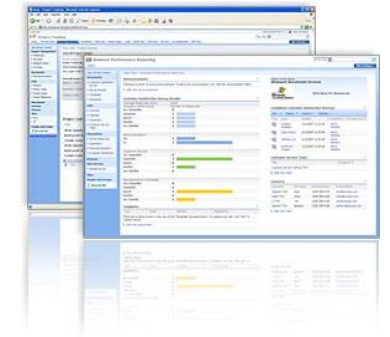

- Fully featured collaboration portal built on Microsoft Sharepoint
- Microsoft Outlook integration
- Single Sign-on for all RESCloud services
- Guaranteed uptime of 99%
- Strong encryption of data
- Antivirus filtering
- 24x7 customer support
- Data backup and recovery
- Web based control panel for rapid administration and user provisioning
- Ability to create custom Sharepoint templates and web parts
